

3 TIPS TO **SECURE** USERS

WORKING FROM HOME

BE SURE DEVICES AND SYSTEMS ARE FULLY PROTECTED.

#1

All devices, operating systems, and software applications should be up-to-date with the latest patches and versions.

CREATE A SECURE CONNECTION BACK AT THE OFFICE.

Use a VPN (Virtual Private Network) to ensure the data transferred between home users and the office is encrypted.

#2

SCAN & SECURE EMAILS, ESTABLISH GOOD EMAIL PRACTICES.

#3

Working remotely will increase the volume of emails as people aren't able to speak face-to-face. At the same time, scammers are inundating workers with Coronavirus phishing emails. It's more important than ever to make sure your email protections are in place and your team is aware of phishing threats.
